

From: PSEG  
TO: Lynbrook Mayor Alan Beach

Good morning:

PSEG Long Island has received approval of the “Environmental Management and Construction Plan” or “EM&CP” for the Western Nassau Transmission Project. Pending the “Notice to Proceed,” we anticipate construction beginning on Tuesday, December 3, 2019 in the Village on Whitehall Street near the substation. In the meantime, environmental testing, such as test hole digging, will continue in anticipation of the construction work.

Beginning with this email, you will be receiving a weekly notification on Mondays about the Project until construction has left your Village, and the immediate area. The messages will begin on Monday, November 25, 2019. Information contained will be the following:

1. General description of the work;
2. Location of the work to be completed within the week, and a look-ahead to the following week;
3. Work hours and timeframes;
4. Potential detours or road closures.

**NOTE:** In order to provide information to the residents of your community about construction, door-to-door activities with door hangers will begin on Monday, November 25, 2019 on Whitehall Street. The representative will have appropriate identification, and will be wearing construction protective equipment.

If you have questions or concerns about the information contained in this email, please contact PSEG Long Island External Affairs or your Major Accounts representative. If you do not know your contact person, please reply to this email, and an appropriate PSEG Long Island designate will respond as soon as possible.

For the general public, please refer them to our website ([www.westernnassautransmission.com](http://www.westernnassautransmission.com)) our email ([info@westernnassautransmission.com](mailto:info@westernnassautransmission.com)) or our hotline (text or voice) (516-780-0665).

Thank you for your cooperation with this important project.
